Make Serial Devices Ready to the Network

The Multi-port Industrial Serial Server SE5408/SE5416 is a gateway between Ethernet (TCP/IP) and RS-232/422/485 communications. It allows almost any serial device to be connected to a new or existing Ethernet network.

By encapsulating serial data and transporting it over Ethernet, SE5408/SE5416 offers full-duplex, bi-directional data transmission transparent between serial port and Ethernet network.

Easy to Use

Flexible configuration options enable this unit to be setup over Ethernet by Telnet, Web browser, Serial Console, or other Windows utilities. Packed in a rugged metal housing with 19-inch rack mount and 100~240VAC wide power input range, SE5408/SE5416 is ideal for almost any industrial and manufacturing automation.

High Performance Device Server

With powerful computing power and Linux platform, it could be a high performance controller for time-critical and high-security applications, such as SCADA, tele-communication, transportation, banking, hospital, etc.
